

**DAVID LEWERENZ,
OD, FAAO**

Dr. David Lewerenz received his Doctor of Optometry degree from the University of Alabama

in Birmingham School of Optometry and completed a residency in Low Vision Rehabilitation and Geriatrics at the Veterans Administration Medical Center affiliated with UAB.

Following a career in private practice, he is now Associate Professor and Chief of Low Vision Services at NSU Oklahoma College of Optometry. In 2014, as Director of the Lesley L. Walls Vision Center, he was able to expand Low Vision services in the Broken Arrow area.

Dr. Lewerenz is a Diplomate in Low Vision in the American Academy of Optometry. Professional positions include Chair of the Low Vision Section of the American Academy of Optometry and Chair Elect of the Vision Rehabilitation Section of the American Optometric Association.

Low vision rehabilitation is supported by national and international organizations concerned with eye and vision care, including the World Health Organization, the National Eye Institute, the American Optometric Association, the American Academy of Optometry and the American Academy of Ophthalmology.

Thank you to former NSUOCO dean Dr. Lesley L. Walls, shown above with his wife, Dr. Mary Ann Walls, and many other contributors who helped build the The Lesley L. Walls Vision Center at Northeastern State University-Broken Arrow.

LOW VISION AND REHABILITATION SERVICES

This state-of-the-art clinic is equipped for a complete evaluation of vision function. Scanning laser microperimetry allows detailed analysis of central dim or blind spots and fixation patterns. An outstanding selection of optical and electronic devices will be available to help patients realize their goals.

Thanks to coordination of care with NewView Oklahoma, a non-profit organization assisting the visually

impaired, a full spectrum of services is available, including orientation and mobility, occupational therapy and assistive technology.

On-site training will ensure patients learn how to properly use their prescribed devices and recommended strategies. Follow-up and training in the home environment will be available for patients who can benefit from it.

We look forward to helping visually impaired people of all ages in Northeastern Oklahoma meet their goals and live independent lives with this new multidisciplinary facility offering comprehensive low vision services.

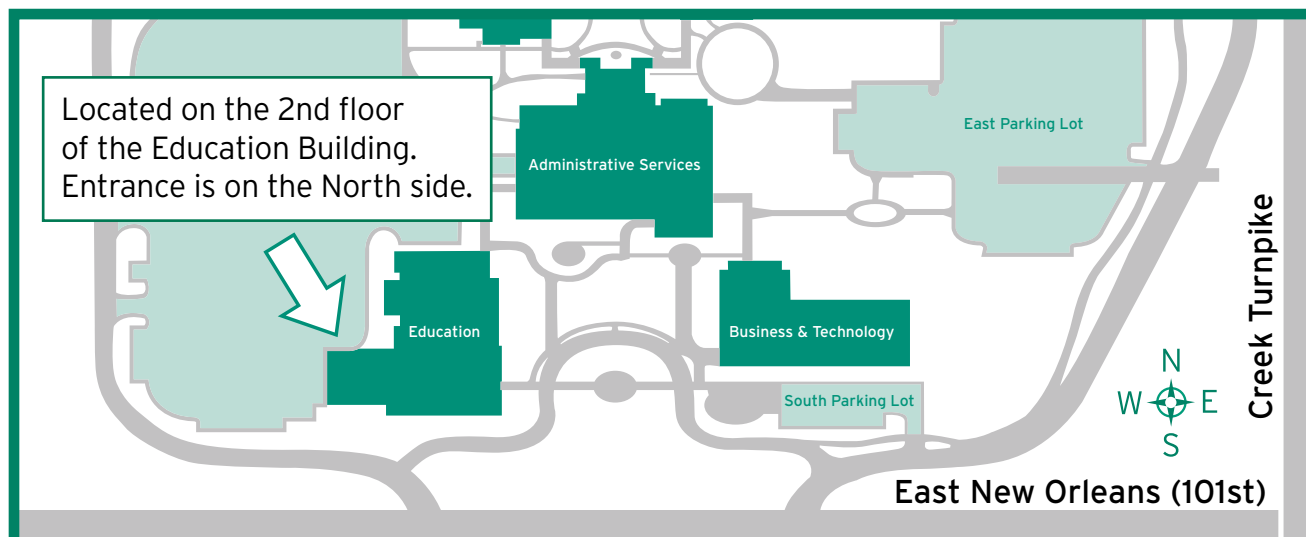

“Through the efforts of the Walls Vision Center I have been able to achieve more independence.”

- Stanford Lane

Stanford Lane has been visually impaired all his life. As a practicing attorney actively engaged in life, his new glasses and optical and electronic devices expand his possibilities at work, at home and when traveling.

Low vision specialist, Dr. David Lewerenz, says, “Our comprehensive evaluation process enables us to evaluate people with all forms of vision loss. Many can be helped with the right magnification or illumination and studies show that about 11-15 percent of visually impaired people can even be helped with a change in their eyeglass prescription.”
