

Appendix D

Residency Curriculum

The educational objectives, learning activities, and expected outcomes of the Residency in Primary Eye Care and Ocular Disease include:

1. Provision of optometric care to a large and diverse number of patients at the CREC with an emphasis in primary eye care and ocular disease.
2. Appropriate referral and co-management of patients with other health care providers. External site visits may be arranged if likely to enhance expertise.
3. Lecture and workshop presentations in the form of continuing education, grand rounds, optometry classroom, etc.
4. Participation in residency seminar activities, including literature review, journal club, and case presentations.
5. Attendance of continuing education courses.
6. Completion of a research paper, literature review, or case report of publishable quality.
7. Active involvement in the optometric community through membership and participation in optometric organizations.
